# PATHMD ORDERING AND SENDOUT REFERENCE

Adapted from the supplied PathMD Quick Guide / November 2026

## PORTAL ORDERING

Log in, choose Create Requisition, and verify location and provider. Enter required patient information and primary insurance or payer details as applicable.

Enter one or two ICD-10 diagnosis codes; verify specimen collection date/time. Select one approved PathMD test menu.

Enter the actual swab source and anatomical site. Save and print the requisition and patient demographic sheet.

## PAPER REQUISITION

Write the correct provider; patient first name, last name and date of birth; ICD-10 diagnosis; collection date; swab source and collection site. Mark only one approved panel.

## PACKAGING AND FEDEX

Collect in the approved PathMD collection device; write patient first and last name AND date of birth directly on the tube. Missing either is an automatic rejection per the quick guide.

Place specimen tube in a specimen bag with printed requisition and demographic sheet.

Put the bag in the silver temperature-control bag and add two frozen ice packs. Close silver bag, place inside labeled FedEx shipping bag, and seal for the scheduled pickup.

Record shipping information in the Lab Sendout Log. Verify all collection and shipment instructions for the clinic.

## RESULTS

The guide describes finalized results delivered by email/fax. In the portal choose All Requisitions > patient > Preview Result.

Review each detected pathogen and reported resistance marker. Antibiotic option tiers are decision support for the treating clinician, not an automatic prescribing instruction.

Prepared as a quick reference from the supplied vendor materials. Current approved SOP governs.
