HEALTHTRACKRX MENU - SELECTED QUICK REFERENCE

Relevant 2026 molecular menu codes for white and green transport tubes

WHITE TUBE MOLECULAR MENUS

RTI - Respiratory Tract Infection; samples may include nasopharyngeal / nares, oropharynx / throat / oral, or cough sputum when permitted by the specific panel.

RTIPROAO - Respiratory Tract Infection Persistent add-on; RTITHRAO - Atypical Pharyngitis, oropharynx / throat / oral only.

PHAR - Pharyngitis; PHARRECAO - Pharyngitis Persistent add-on, using the approved throat/oral specimen.

FCRSV - Flu / COVID / RSV; approved nasopharynx / nares specimen.

UTI - Urinary Tract Infection molecular panel when ordered; for urine follow the vendor white-top transfer directions and maximum fill volume.

GREEN TUBE FOR THROAT CG

CGGY - Chlamydia/Gonorrhea (CG): includes Chlamydia trachomatis and Neisseria gonorrhoeae. Specimen sources listed in the vendor guide are vaginal, rectal, and oral for the green collection tube.

For throat GC testing, select the oral / throat collection site on the CGGY requisition and use the approved green tube and swab. Do not substitute a yellow urine tube.

CHECK BEFORE COLLECTING

This is a selected reference index, not the full HealthTrackRx menu. Verify exact code, source, tube, stability, and transport against the current vendor guide and your site’s approved ordering configuration.

The vendor menu includes other test categories and specimen containers, which are intentionally outside this clinic’s two-tube workflow.

Prepared as a quick reference from the supplied vendor materials. Current approved SOP governs.
