Upon successful completion of this training checklist, the Trainee and Trainer will sign and date the checklist at the end.

Training Task Description	Trainee Initials	Trainer Initials
External Quality Control (QC) a) External QC is tested with each new lot/shipment. b) The following data must be recorded when QC is run. QC for test type, QC level, QC lot number, QC expiration date, QC results, test date, and testing personnel initials. c) There are 2 levels of QC that are run, a positive and a negative control. d) Control samples must come to room temperature prior to testing.		
Reagent Handling a) The test Cassette must remain in the sealed pouch until use.		
Sample Handling a) Whole blood samples collected into the heparin green tube, EDTA lavender tube, or a direct fingerstick is used for the test. b) Whole blood can be stored in the refrigerator for 24 hours prior to testing.		
Test Procedure a) Remove the Cassette from the sealed pouch and use it as soon as possible. b) Place Cassette on a level surface. c) Use the 25 uL pipette with a red line for whole blood samples. Hold the tip of the pipette to the blood sample. The sample will automatically fill to the line. d) Dispense the sample into the top half of the Sample Well on the Cassette by squeezing the pipette bulb. e) Add 2-3 drops of Developer Solution into the lower half of the Sample Well. f) Start the timer for 8 minutes. Do not read test after 15 minutes.		
Results Interpretation a) Make sure the background is clear before reading the result. b) A Control line should always appear in the “C” region. If no control line is present, the results are invalid and the test should be repeated with a new test Cassette.		
Support a) Know to call Technical Support when requiring technical assistance, troubleshooting, and error reports – 1 877 866 9335.
